

ANDREI FEDIANOV

andrei.fedianov@gmail.com

Rula (via Insight Global), Atlanta, GA
Staff Backend Engineer - Contractor

December 2025 – Present

- Designed and built scalable backend services and platform APIs using TypeScript, Node.js, and Fastify across multiple microservices on AWS EKS, supporting a HIPAA-compliant healthcare platform for patient scheduling, billing, and care team communication
- Drove a strangler-pattern migration replacing a legacy API gateway with a Node.js/Fastify proxy, using an OpenAPI 3.x driven architecture to keep routing and contracts in sync across services
- Migrated the platform's authentication to Auth0 JWT with end-to-end type safety, converting 40+ client call sites across 8 API clients to a secure, token-based fetch path
- Integrated the service with a Kong API gateway, registering routes from the OpenAPI spec and resolving cross-origin and gateway-routing issues at the edge
- Designed ElastiCache/Redis caching strategies with cache stampede mitigation for high-traffic endpoints on EKS
- Strengthened deployment reliability by adding automated CI gates that caught configuration and type-safety issues before they reached production
- Integrated upstream services across medical billing and patient-data domains within a PHI/HIPAA-compliant architecture
- Owned the end-to-end deployment pipeline across multiple repositories, spanning frontend delivery to S3/CloudFront and containerized services to AWS EKS via Harness
- Leveraged agentic coding tools (Copilot/Claude Code via AWS Bedrock) to accelerate development workflows

Major Technologies used: **TypeScript, Node.js, Fastify, OpenAPI, Okta/Auth0, Kong, ElastiCache/Redis, AWS EKS, S3/CloudFront, Harness, Docker, Kubernetes**

Brickhouse Resources, Atlanta, GA (Remote)
Senior Backend Engineer - StreamLabs Water

April 2024 – May 2025

- Designed, developed and deployed new software functions and features for IoT products & services
- Developed AWS functionality to process data and alerts from Smart-Home water meters which notify homeowners via Push/SMS/Email
- Implemented support APIs for mobile apps, web apps, subscription management and third-party integrations
- Developed new features for the internal-facing web dashboard to enhance customer support functions such as device troubleshooting, user account management, and subscription management

Major Technologies used: **JavaScript, Node, AWS, Lambda, OpenTofu**

AutoFi, San Francisco, CA (Remote)
Senior Backend Engineer

July 2022 – February 2024

- Lead development of new products, features, APIs, and user experiences
- Built robust infrastructure to support new services and products
- Contributed to engineering best-practices
- Worked with product and design to inform trade-offs and scalability concerns

Major Technologies used: **JavaScript, Node, MongoDB, Docker, Heroku, AWS**

ThingTech, Atlanta, GA

August 2015 – July 2022

Senior Software Engineer/Lead DevOps & Architect

- Responsible for infrastructure design, implementation, and support
- Led the transition to AWS for Series A funding by modernizing legacy infrastructure
- Architected APIs which handles matching GPS coordinates to a logical model of the real world
- Developed internal analytics and statistics tracking tools with AWS integration
- Implemented a distributed web-socket back-end service which increased the capability of gathering, sorting and distribution of incoming JSON messages from 1,000 to 5,000

- Led the architecture, implementation, and development of advanced customer-facing reporting API features using NodeJS/TypeScript, integrating metadata with static data from AWS RDS and AWS Redshift
- Spearheaded the development of several real-time mobile applications utilizing React-Native, NodeJS, and Elixir, enhancing operational efficiency and user engagement
- Engineered a comprehensive Scaffolding Inventory Management System, enabling precise tracking of inventory, maintenance, and safety status of each structure

Major Technologies used: **AWS, JavaScript, React, Node, React-Native, Elixir, Postgres, Docker, Terraform, TypeScript**

Tin Roof Software, Atlanta, GA

March 2015 – August 2015

Contractor

- Developed and maintained COX Communications' Video-on-Demand(VOD) back-end reporting system
- Responsible for the development of internal error management tools for the COX VOD system
- Developed a dashboard interface to interact with VOD analytics data
- Implemented UAT for back-end and front-end applications to support VOD

Technologies used: **Ruby on Rails**

Premiere Global Services Inc., Atlanta, GA

July 2011 – August 2014

Software Engineer – iMeet (now GlobalMeet)

- Developed the Java back-end for iMeet, an online meeting service with webcam, chat, phone, file sharing, etc
- Responsible for planning, developing, deploying and testing new back-end features and services
- Collaborated with the front-end, mobile, and operations teams in order to ensure features were added smoothly throughout every platform with no service interruption

Technologies used: **Java, Apache MINA, MySQL, Hibernate, Ruby on Rails, Redis, CentOS**

EDUCATION

AWS Solutions Architect

March 2020

Emory University, Atlanta, GA

August 2007 – May 2011

Bachelors of Science in Computer Science

SKILLS

Programming Expertise: NodeJS, TypeScript, React, React-Native, Redux, Elixir, Phoenix, Postgres, DynamoDB, Lambda, and other AWS Tools, Docker, Kubernetes, Java, Ruby/Sinatra, MySQL, MongoDB, Redis

Programming Tools: Git, SVN, #!/bin/bash, Agile Process

Certifications: AWS Solutions Architect

Foreign Languages: Fluent in Russian

Entrepreneurship: Business start-up tactics, analytical problem solving, critical thinking, time management, business planning and management, branding, marketing strategies, networking
